GUESS, THEN REVEAL

The 2027 batch, everyone registered for placements: how many are on no drive list at all?

your guess

nickname (optional)

Lock it in

Shown on the speaker's screen to everyone in the meet. Use a nickname; Instagram handle optional.

On campus, it's cooked.

Shown live

How many of the batch above you have cleared even one round. The numbers are shared by the speaker during the session.

GUESS, THEN REVEAL

BME, 2027 batch: how many are on no drive list?

your guess | nickname (optional) | Lock it in

Shown on the speaker's screen to everyone in the meet. Use a nickname; Instagram handle optional.

Branch is not the excuse. The gap is preparation.

Shown live

Per branch: drives open, registered, cleared a round, cleared none. The numbers are shared by the speaker during the session.

GUESS, THEN REVEAL

The cell called companies all summer. How many came to campus?

your guess

nickname (optional)

Lock it in

Shown on the speaker's screen to everyone in the meet. Use a nickname; Instagram handle optional.

The companies are outside.

Shown live

How many companies the cell called this summer, and how many came. The numbers are shared by the speaker during the session.

BEST PLACES TO APPLY

Where do you actually apply? Let's rank them.

Drag a tile, or tap a tile then tap a row. Your placement counts as your vote.

What seniors tell juniors, and what to do before an interview.

1. Ten tailored applications beat five hundred generic ones. Read the company, make the CV for it, mail the founder.
2. Learn concepts, not languages: microservices, pods, scaling. Everyone needs some JavaScript, APIs and SQL.
3. Under 200 LeetCode? Don't quote the number. Keep solving.
4. Say what your project did, with a number. Nobody can see it ran for the whole college.
5. Startups worry you won't show up. Say when you can join, and keep it.
6. Walk up to seniors without hesitation. Ask one concrete question about your road.
7. DSA gets you in the door. Development is the longer game: it never stops changing.
8. Bangalore is always open. Off-campus is not luck if you start in second year.

1. Three solid projects, two internships. Headline each by what it does, then explain how.
2. Know your terms cold. Fumbling the words reads as not having studied.
3. Prompt your own project into 15 points, then mock-interview yourself out loud.
4. Read every line of your CV: about half the questions come from it. Carry a college-format hard copy.
5. MNC portals rarely reply, even with follow-ups: HR filters on college name. Go through people.
6. The 2026 graduates' market lands in 2027. "Lots of time" is the trap.

> **A recent check:** for one well-known company's opening, every alumnus working there has a master's. Before you apply, look at who actually works there. That is the real bar.

LIVE: OUTREACH

Outreach, live: write one together.

Cold mail | LinkedIn DM

- Casual, not formal. Subject: builder, looking for <role>.
- Line 1: proof of work, with a link and a number
- Line 2: why this company, specifically
- Line 3: I can join now, zero notice period. CV attached.
- Send it to the address on the job post. One person, not ten.
- Follow up. The content decides replies, not the count.
  - Live demo: one written in front of you

APPENDIX: THE SEASON

The season in numbers.

This season, so far.

Shown live

Drives by type, the busiest months, the median CTC and stipend. The numbers are shared by the speaker during the session.

Money and the calendar.

Shown live

Every CTC and stipend, the month-by-month calendar, cut-offs and bonds. The numbers are shared by the speaker during the session.

Every drive, and the seasons before.

Every drive this season: who sat, who got interviewed, who made the list.

Shown live

One small chart per drive. The numbers are shared by the speaker during the session.

Three seasons side by side.

Shown live

What the cell's files show for the last three seasons. The numbers are shared by the speaker during the session.

Every company this season.

Shown live

Type, CTC, stipend, cut-off and branches for every drive. The numbers are shared by the speaker during the session.

Pick your road, and what engineering means now.

MNC or Dev? The road decides the work.

MNC / product OA

- Competitive programming is the filter
- Contest rating > random question count
- LeetCode + Codeforces contests, every week

Dev / startup

- Open source is the proof
- LFX mentorship is open right now
- Merged PRs in real orgs > tutorial projects

Either road: finish one sheet (Striver A2Z / NeetCode 150 / CSES) before you count questions.

Quick question: what is software development?

Tech is compressing

- It's an umbrella word for fifty different jobs, not one.
- One engineer now does many of them. Know more than one thing.
- A single intern role can mean evals, a desktop app, field visits and support in one year.

Core is not dead

- Embedded, VLSI, avionics, aerospace: design and test, end to end.
- It's the future, if you commit to it.
- Seniors can get you contacts, up to the gate. Getting in is your work.
